

Hear the Children

Where Deaf Children
Learn to Listen and Talk

Most children who are deaf can learn to use their residual hearing through cochlear implants and hearing aids to listen and to talk just like their hearing peers.

Hear the Children Auditory-Verbal Early Intervention Centre provides individual therapy sessions for the deaf child and support for the family. Over 90% of the children enrolled in this excellent program are successfully integrated into their local schools at age 5.

Your donation or bequest will help give the gift of speech to a deaf child, a gift that many hearing people take for granted.
